# Market Update: The Year in Review

Useful Information for Your Business & Financial Success

## 2019 Summary

In the US, small cap stocks underperformed large cap stocks, and value stocks underperformed growth stocks using Russell indices. The Russell 2000 Index rose by 25.5% for the year vs. 31.43% for the Russell 1000. The Russell 3000 Value Index returned 26.3 in 2019 vs. 35.8% for the Russell 3000 Growth Index. The variation in returns between these indices is within historical norms. Since 1979, there has been an annual return difference of 6% or greater 60% of the time.

In developed ex US markets, small cap stocks outperformed large cap stocks and value stocks underperformed growth stocks. Over three-, five-, and 10-year periods, small cap stocks, as measured by the MSCI World ex USA Small Cap Index, have outperformed large caps, as measured by the MSCI World ex USA Index. Growth stocks, as measured by MSCI World ex USA Growth Index (IMI), returned 27.9%, outperforming value stocks, which returned 17.0% in 2019, as measured using the MSCI World ex USA Value Index (IMI).

The complementary behavior of size (small vs. large) and relative price (value vs. growth) in international developed markets in 2019 is a good example of the benefits of diversification. While value stocks underperformed, diversified portfolios were buoyed by outperformance among small cap stocks. This integration can increase the reliability of outperformance and mitigate the impact of an individual asset group's underperformance.

In emerging markets, small cap stocks, as measured by the MSCI Emerging Markets Small Cap Index,

underperformed large cap stocks, as measured by the MSCI Emerging Markets Index.

Value stocks returned 11.9% as measured by the MSCI Emerging Markets Value Index (IMI), underperforming growth stocks, which returned 25.1% using the MSCI Emerging Markets Growth Index (IMI).

Despite recent years' headwinds, the size, value, and profitability premiums remain persistent over the long term and around the globe. It is well documented that stocks with higher expected return potential, such as small cap and value stocks, do not realize outperformance every year. Maintaining discipline to these parts of the market is the key to effectively pursuing the long-term returns associated with size, value, and profitability.

In fixed income, interest rates decreased in the US Treasury market during 2019. The yield on the 5-year Treasury note declined 82 basis points (bps), ending at 1.69%. The yield on the 10-year T-note decreased 77 bps to 1.92%. The 30-year Treasury bond yield decreased 63 bps to 2.39%.

In terms of total returns, short-term corporate bonds gained 6.99%. Intermediate corporate bonds had a total return of 10.14%.

The total return for short-term municipal bonds was 3.66%, while intermediate munis returned 6.86%. Revenue bonds outperformed general obligation bonds.

# Impact of Diversification

## 2019 Index Returns

These portfolios illustrate the performance of different global stock/bond mixes. Mixes with larger allocations to stocks are considered riskier but have higher expected returns over time.

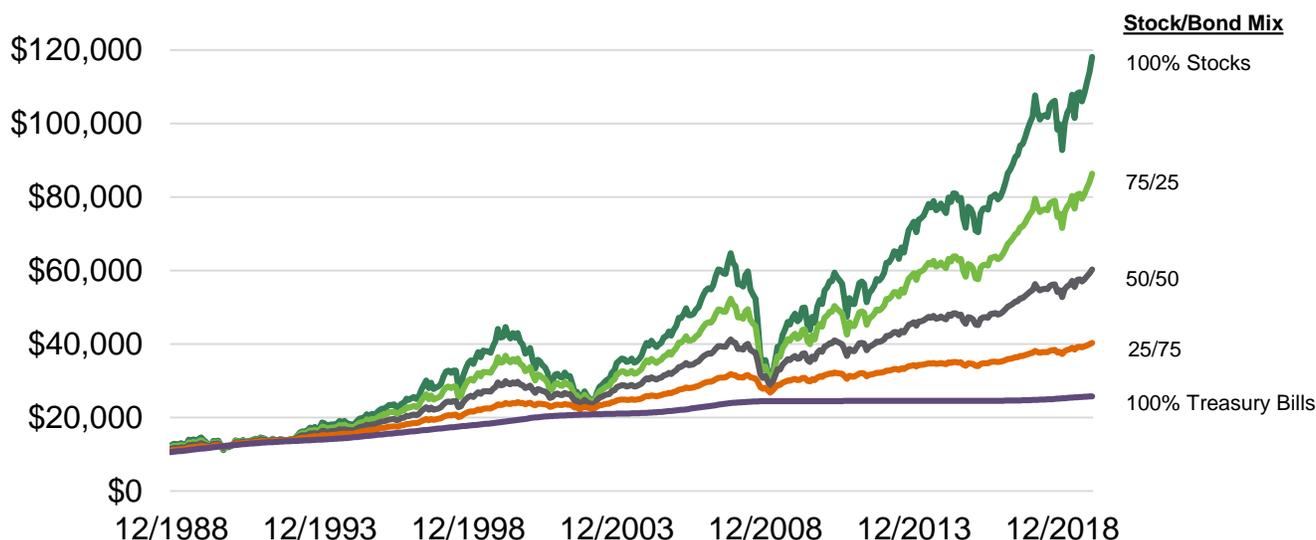

### Ranked Returns (%)

### Period Returns (%)

Asset Class	* Annualized				
	1 Year	3 Years*	5 Years*	10 Years*	10-Year STDEV <sup>1</sup>
100% Stocks	27.30	13.05	9.00	9.37	13.18
75/25	20.69	10.21	7.08	7.27	9.89
50/50	14.29	7.35	5.10	5.09	6.59
25/75	8.11	4.47	3.07	2.83	3.30
100% Treasury Bills	2.14	1.58	0.99	0.52	0.22

### Growth of Wealth: The Relationship between Risk and Return

1. STDEV (standard deviation) is a measure of the variation or dispersion of a set of data points. Standard deviations are often used to quantify the historical return volatility of a security or portfolio.

Diversification does not eliminate the risk of market loss. **Past performance is not a guarantee of future results. Indices are not available for direct investment. Index performance does not reflect expenses associated with the management of an actual portfolio.** Asset allocations and the hypothetical index portfolio returns are for illustrative purposes only and do not represent actual performance. Past performance is not a guarantee of future results. This information is provided for educational purposes only and should not be considered investment advice or a solicitation to buy or sell securities. There is no guarantee an investing strategy will be successful. Diversification does not eliminate the risk of market loss.

Investing risks include loss of principal and fluctuating value. Small cap securities are subject to greater volatility than those in other asset categories. International investing involves special risks such as currency fluctuation and political instability. Investing in emerging markets may accentuate these risks. Sector-specific investments can also increase these risks.

Fixed income securities are subject to increased loss of principal during periods of rising interest rates. Fixed income investments are subject to various other risks, including changes in credit quality, liquidity, prepayments, and other factors. REIT risks include changes in real estate values and property taxes, interest rates, cash flow of underlying real estate assets, supply and demand, and the management skill and creditworthiness of the issuer.
